

City of Davis Pavement Condition Index by Street

Pavement Condition Index is a measure of the condition of a street (or bike path) on a scale from 0 to 100 with a score of 100 given to a newly paved street or path.

The fall 2012 survey of City streets and bike paths assigned the overall network an average PCI of 62 for streets and 59 for bike paths.

The graphic below is taken from the Pavement Management Report prepared by Nichols Consulting Engineers for the City. Please review the [Nichols report](#) for additional information.

Each street is divided into sections such that each section is considered homogenous; the section is consistent in terms of width, paving surface, previous maintenance treatments, etc. Each street section has its own PCI, so a single street could have several sections with different PCIs, rather than one PCI for the entire street.

The following searchable table lists the Pavement Condition Index (PCI) for each City of Davis Street section in alphabetical order by Street name.

Condition Category	Pavement Condition	PCI Category
I	Good to Excellent	100
II/III	Fair	70
IV	Poor	50
V	Failed	25
		0
